SUMMARY

Design Engineer and senior frontend developer with 7+ years of experience, specializing in design systems, accessibility, and the bridge between engineering and product thinking.

Introduced and led a full Ant Design → Radix UI migration - 30+ components, Storybook-documented, 50% CSS bundle reduction - and shipped WCAG AA in production across multiple products.

CORE SKILLS

Design Systems & UI	UI Architecture, Radix UI, Tailwind CSS, Storybook, shadcn/ui, Figma, CSS animations, Modern CSS/HTML features
Core Stack	React, TypeScript, JavaScript (ES6+), Next.js, HTML, CSS, AI-assisted development
Accessibility	WCAG AA, keyboard navigation, screen reader compatibility, EU EAA
State & Data	TanStack Query, Jotai, React Hook Form, Zod
Testing	Vitest, Jest, React Testing Library, Cypress
Tooling & Workflow	Vite, Turborepo, Git, Monorepo architecture, GitHub Actions, Astro
Additional	Vue 2, Node.js (basic), Webpack, web performance optimization

WORK EXPERIENCE

Pixel Point	Nov 2025 - Jan 2026
Senior Frontend Engineer	
- Rebuilt the primary navigation on neon.com - full keyboard support, screen reader-safe markup, brand-styled focus and hover states, and content accessible for assistive technologies; shipped as part of the main page redesign	
Harness (Independent Contractor via Pixel Point)	Jan 2025 - Oct 2025
Design Engineer	
- Built 10+ components for Harness' new custom design system (github.com/harness/canary) - independently owned from design spec to production; contributed new features, components, and architecture patterns to the documentation portal - Introduced WCAG AA practices to Harness's engineering team - led discussions on component-level accessibility issues, drove keyboard navigation improvements to production, and directly implemented fixes where needed - Integrated design system components into the Gitness (open-source code hosting & pipeline engine) codebase and resolved 50+ cross-platform issues across the product, maintaining test coverage throughout	
Frame (Pre-Seed startup - AI-powered company workspace)	Mar 2023 - Nov 2024
Senior Frontend Developer	
- Identified the need for a full design system migration, made the case to leadership, then led the execution over 14 months alongside regular feature delivery — Ant Design to a custom Radix UI-based component library, 30+	

components, 50% CSS bundle reduction, eliminating layers of override CSS and improving accessibility across the app

- Restructured 5 isolated frontend modules into a shared architecture — identified duplications across apps, separated shared components and patterns from business-specific logic, and reduced inconsistency across the product
- Documented 100+ Storybook stories across the design system and app-specific components
- Designed and built an email tag input component that automatically parses, deduplicates, validates, and categorizes bulk-pasted email lists - eliminating manual input cleanup entirely, the app handles it, not the user
- Acted on data showing 25% of first-time users opening the platform on mobile; made the case to leadership and voluntarily rebuilt the mobile experience outside working hours
- Migrated to a monorepo using Turborepo — eliminated the publish-redeploy cycle for design system changes, enforced clean package boundaries between design system and app-specific components, and shared ESLint and TypeScript configs across packages for consistent code quality. The monorepo grew from 8 to 18 packages and services as the product scaled
- Earned de facto frontend lead role through consistent delivery; mentored mid-level developers

buildbuild (construction-focused project management software)

Sep 2021 - Dec 2022

React Developer

- Independently proposed and built a multi-select document feature modeled on Gmail's selection pattern - made bulk selection up to 10x faster compared to one-by-one card selection
- Built product features and reusable components using React, TypeScript, Next.js, Apollo Client, and GraphQL

Accenture

May 2020 - Sep 2021

React Developer

- Contributed to two banking platform projects in large Scrum teams — new feature development, performance improvements, and post-migration refactoring

2UPLab

Nov 2018 - May 2020

Frontend Developer

- Built client interfaces across multiple industries
- Participated in a large-scale redesign of a major retailer website using Vue.js (Vue 2), where also implemented an infinite-scroll carousel using Intersection Observer API to solve a visible loop reset problem

ADDITIONAL EXPERIENCE

Mentor - HTMLAcademy (online frontend school)

2019 - 2020

Mentored 30+ students learning frontend development; several secured their first developer roles

Frontend Internship Program - Accenture

Summer 2020

Independently designed and ran a summer internship program for ~80 university students; structured curriculum around HTML/CSS and JavaScript, organized through GitHub, and delivered group feedback at final review

EDUCATION

HTML Academy - Frontend Development Program

2017 - 2018

Southern Federal University - Inorganic Chemistry

2005 - 2009

LANGUAGES

English - C1 · Russian - Native
