SUMMARY

Senior Frontend developer with 7+ years of experience, specializing in design systems, accessibility, and frontend architecture. Use AI coding tools daily maintaining full ownership of architecture and design decisions.

Introduced and led the complete Ant Design → Radix UI migration: 30+ components fully documented in Storybook, 50% CSS bundle reduction, full WCAG AA support in production across multiple products.

CORE SKILLS

Core Stack	React, TypeScript, JavaScript (ES6+), Next.js, HTML, CSS, AI-assisted development (Claude Code, Cursor)
Design Systems & UI	UI Architecture, Radix UI, Tailwind CSS, Storybook, shadcn/ui, Figma, CSS animations, Modern CSS/HTML features
Accessibility	WCAG AA, keyboard navigation, screen reader compatibility, EU EAA
State & Data	TanStack Query, Jotai, React Hook Form, Zod
Testing	Vitest, Jest, React Testing Library, Cypress
Tooling & Workflow	Vite, Turborepo, Git, Monorepo architecture, GitHub Actions, Astro
Additional	Vue 2, Node.js, Apollo Client/GraphQL, Webpack, web performance optimization

WORK EXPERIENCE

Pixel Point Senior Frontend Engineer	Nov 2025 - Feb 2026
- Rebuilt the primary navigation on neon.com: full keyboard support, screen reader-safe markup, brand-styled focus and hover states; shipped as part of the main page redesign	
Harness (Independent Contractor via Pixel Point) Design Engineer	Jan 2025 - Oct 2025
- Built 10+ components for Harness' new custom design system (github.com/harness/canary) from spec to production; contributed new features, components and architecture patterns to the documentation portal - Introduced WCAG AA practices to Harness' engineering team: led discussions on component-level accessibility issues, shipped keyboard navigation improvements to production and directly implemented fixes where needed - Integrated design system components into the Gitness (open-source code hosting & pipeline engine) codebase and resolved 50+ cross-platform issues across the product	
Frame (Pre-Seed startup - AI-powered company workspace) Senior Frontend Developer	Mar 2023 - Nov 2024
- Identified the need for a full design system migration, made the case to leadership, then led the execution over 14 months in parallel with ongoing feature work: from Ant Design to a custom Radix UI-based component library,	

30+ components, 50% CSS bundle reduction, eliminating layers of override CSS and improving accessibility across the app

- Restructured 5 isolated frontend modules into a shared architecture: identified duplications across apps and separated shared components and patterns from business-specific logic
- Documented 100+ Storybook stories across the design system and app-specific components
- Designed and built an email tag input component that automatically parses, deduplicates, validates, and categorizes bulk-pasted email lists, eliminating manual input cleanup entirely
- Noticed that 25% of first-time users were coming from mobile; took the ownership and rebuilt the experience on my own time
- Migrated scattered repositories to a monorepo (Turborepo): eliminated the publish-redeploy cycle for design system changes, enforced clean package boundaries between design system and app-specific components. The monorepo grew from 8 to 18 packages and services
- Built the UI for Frame's AI-agent feature - a chat interface with streaming responses, markdown rendering with custom renderers and interactive elements (buttons, styled in-app links); owned the full async flow: prompt submission, loading states, error handling, etc.

buildbuild (construction-focused project management software)

Sep 2021 - Dec 2022

React Developer

- Independently proposed and built a multi-select document feature modeled on Gmail's selection pattern; it made bulk selection up to 10x faster compared to one-by-one card selection

Accenture

May 2020 - Sep 2021

React Developer

- Contributed to two banking platform projects in large Scrum teams: new component development and post-migration refactoring

2UPLab

Nov 2018 - May 2020

Frontend Developer

- Participated in a large-scale redesign of a major retailer website using Vue.js (Vue 2), where also implemented an infinite-scroll carousel using Intersection Observer API to solve a visible loop reset problem

ADDITIONAL EXPERIENCE

Mentor - HTMLAcademy (online frontend school)

2019 - 2020

Mentored 30+ students helping them learn the frontend development; several got their first developer roles

Frontend Internship Program - Accenture

Summer 2020

Independently designed and ran a summer internship program for more than 80 university students. Structured the program around HTML/CSS and JavaScript and gave group feedback at final review

EDUCATION

HTML Academy - Frontend Development Program

2017 - 2018

Southern Federal University - Inorganic Chemistry

2005 - 2009

LANGUAGES

English - C1 · Russian - Native
